LAUWERS

COMFORTABLE

The long lifting arm with reduced angle ensures the leek to enter easily and without damage between the soft and large rubber belts. The combination of two shakers, two brushes and the disk guarantees that the leek comes clean and equal on the conveyor belt.

RUBBER DISKS

By using two flexible rubber disks instead of one, we have created more space in the centre of the disks to let the roots enter and leave the disk easier. This ensures the leek comes aligned on the flat conveyor belt.

RELIABLE

All LAUWERS machines are built with the most reliable parts for hydraulics, transmission etc. to ensure long lasting and uncomplicated working. Even under the toughest conditions, our machines keep working for you !

The frame of the machine has a foldable pallet lift and left wheel to have a compact machine on the road and a large and stable machine in the field. The big, large wheels support the back frame and keep it clear from the ground.

DOUBLE TRIMMING DISKS

The hardened double leaf disks with special profile cut the leaves with a clean edge. These disks are maintenance free and last very long.
